Type of activity: Diving & Snorkeling

Experience level: Suitable for all levels.

Depth range: 10 – 30 meters

Characteristics: This dive site, located inside the atoll's eastern side, consist of a large pinnacle with overhangs. Starting from 6 to 9 meters, the thila goes down to 40 meters and lies on a sandy bottom. The north side is full of soft corals especially yellow and pink. Fan corals can be found at around 24 meters.

Marine life: Scuba divers can expect to see clouds of four line snapper and fusilier being chased by dogtooth tuna and blue trevallies. On the shallow part juvenile reef fish are usually chased by snappers and jack fish. Stingrays are resting in the overhangs surrounded by soft corals and sea fans. In the small caves it is easy to find brown marbled and black saddled groupers. Divers can also find schools of sweetlips, mackerels, and larger groupers. From June to November, the thila serves as a cleaning station for Manta rays.

Marine life: This dive site offers healthy hard corals specially in the shallow area and nice soft and whip corals in the deeper area. A great place to find lobsters and moray eels, as well as pufferfish, porcupinefish, snappers and even tunas passing by in the blue water. The pink corals and fan corals on the wall offer lots of small marine life to discover. Stingrays can be seen inside the deeper cave around 25 meters, and fusiliers are always being chased by dogtooth tuna and giant trevallies.
